

How to install the Mac viewer software

Mac OSX has undergone security upgrades over the past few years that make it harder to install non Apple software. This is both good and bad, good because the Apple platform has become more secure but annoying for installing new software. Here is a simple run through on installing our viewer.

1. Download and open the file from www.uvue.com.au/downloads
2. Drag the file to you open application folder. Note, this is not the shortcut on the dock. Go to Hard drive > User name > Applications folder

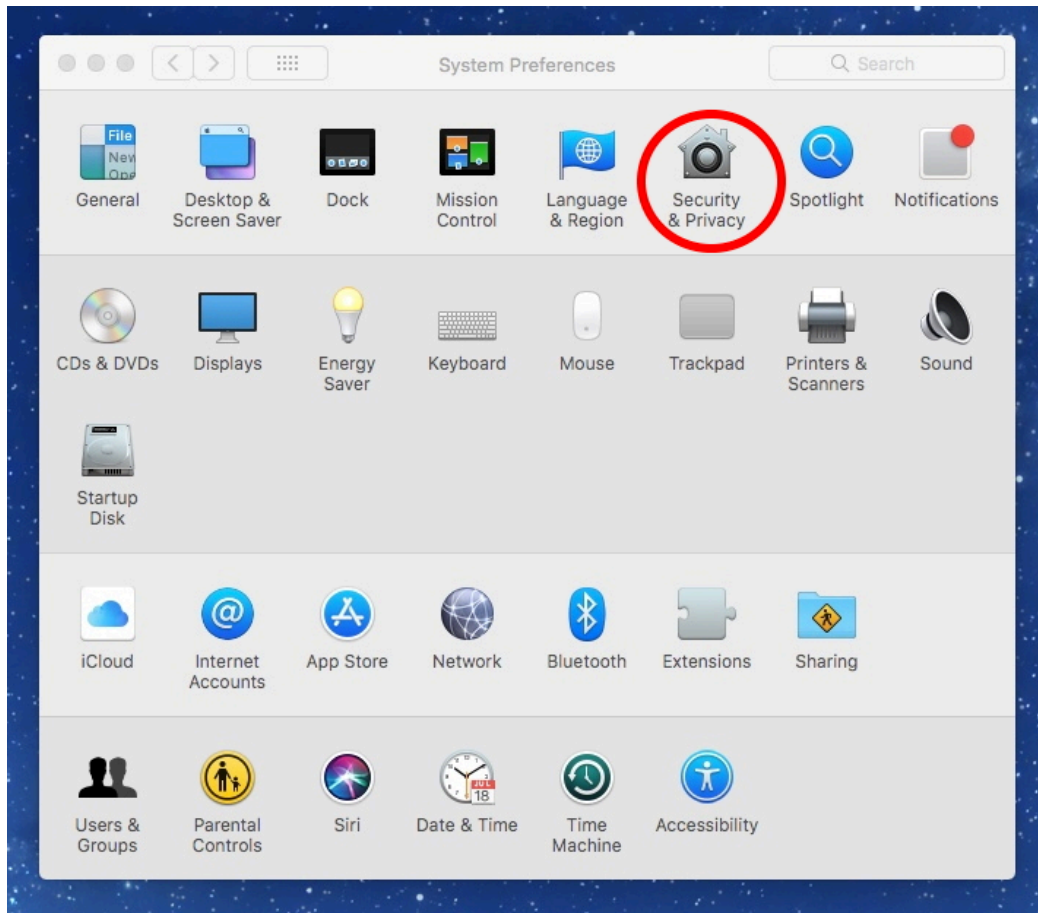

3. Open the program from your applications folder

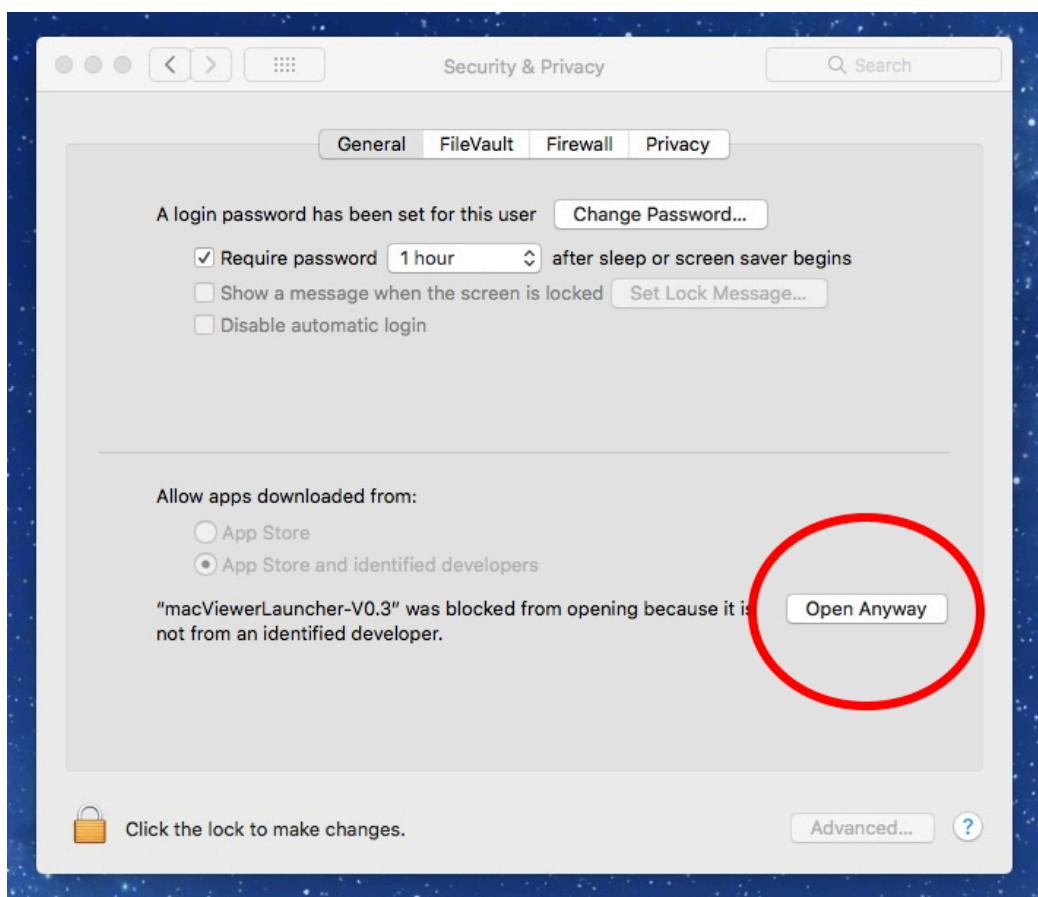

4. You will see the above warning when you try to open the program

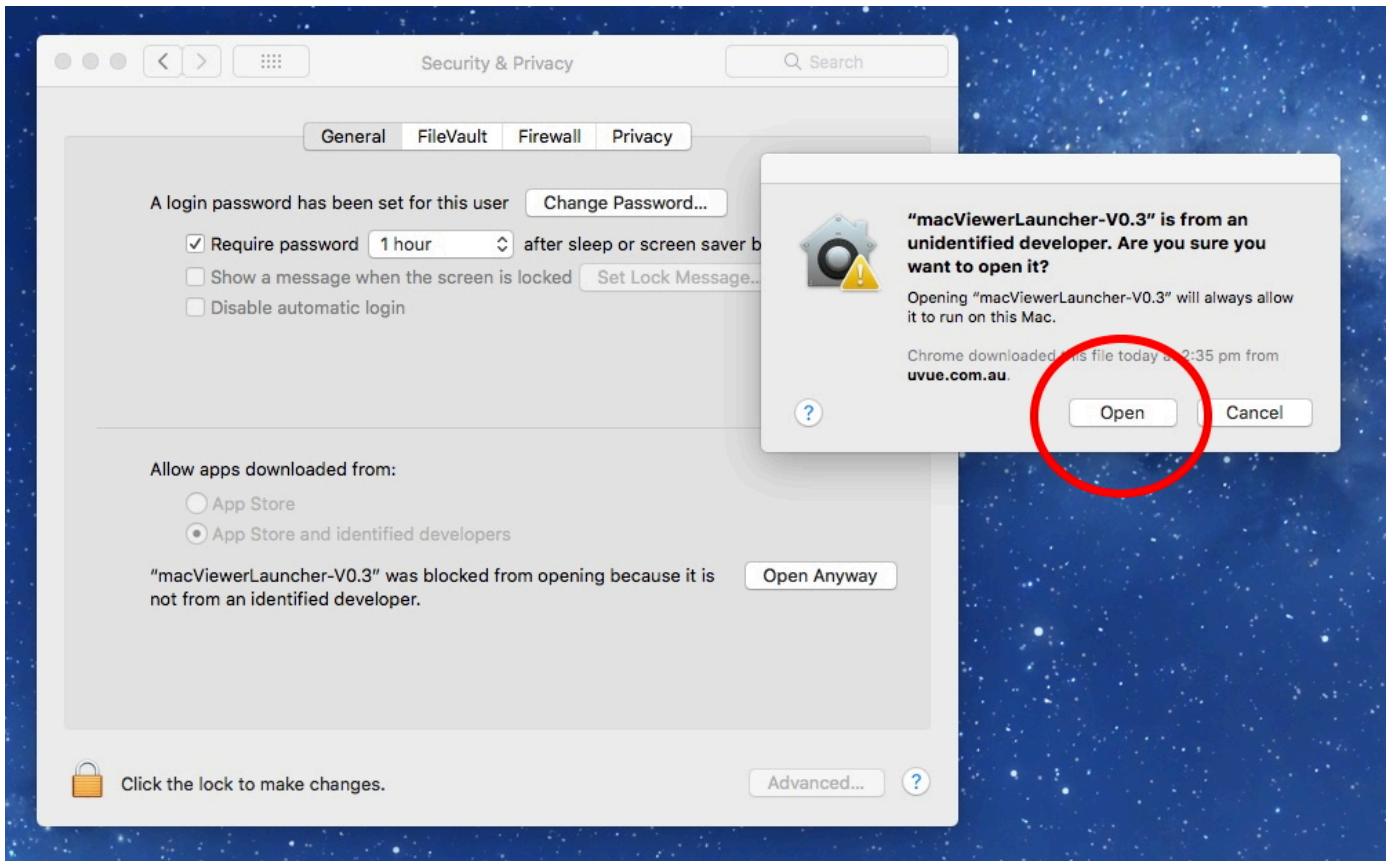

5. Click “system preferences” from the top taskbar (under the Apple icon) and select “Security and Privacy”

6. Select “open anyway”

7. Select open

8. Enter your password if prompted. That's it!
